Background

Claudin 9, also known as Claudin-9 and CLDN9, is an integral membrane protein with 4 transmembrane domains, two extracellular loops, one intracellular loop, both N-terminus and C-terminus ends towards the cytosol. Human Claudin 9 is a member of Claudin protein family, involved with tight junctions and cell-to-cell adhesion. Claudin 9 is barely distributed in normal adult tissues but is ectopically expressed in various cancer cells. Claudin 9 is a novel prognostic biomarker for endometrial cancer and also functions as a coreceptors for Hepatitis C Virus.
